

Learning while having fun!

Participants of the Vedic Mathematics Seminar.

We never feel tired when we do something which is interesting. While watching movie, even if we feel sleepy, we keep watching - ignoring the sleep. A kid forgets about food and other activities if he finds some entertainment. No need to say in modern days video

games became life to many kids.

On May 8th, Friday Sanghamitra organized a seminar on Vedic Mathematics. Audience were spell bound by hearing the formulae. Some of the participants showed interest in learning those techniques online if Sanghamitra provides online demonstration.

When the problem solving techniques are given in fun way, kids not only learn them, but also like to explore new things. Basically these seminars gives confidence in them, not the solution for each and every problem. Once the foundation is strong, building super structure is easy. More than Eighty audience participated in that program. Later Sanghamitra shared the Vedic Mathematics knowledge as well as problem solving techniques in Four other different places namely San Jose, Sunnyvale, Cupertino, Santa Clara etc. The idea behind these sessions is to encourage the participants to share what they know with others, by which they acquire more knowledge.

Let us meet again in October issue. Till then good bye!

- SuSri.
